**ULTIMATE BODY REAMER**

Body reamers may all seem the same but they are not; each has its own special little feature. This one from DuraTrax has a super sharp cutting tip so you don't have to press down hard to remove material. There is also a rubber ring on the back to hold the safety cap while you're using it. It's finished with a blue anodized knurled handle for easy grip.

**HUDY**

**CASTER CLIP REMOVAL TOOL**

Most modern touring cars use those clips to adjust caster. If you've ever tried to get them out with your hand, you probably know it's pretty hard. Racers, you'll be happy to see this tool. It has a hardened spring steel tip hook to grab the clip, which allows you to yank it off to be moved. Since it's a Hudy tool, you better believe it's a high quality item.

**MACHINED PINION AND SPUR GEARS**

Precision Racing

Systems offers precision cut gears in both 48 and 64 pitch. The machine cut teeth ensure a perfect gear mesh every time. The pinion gears are machined to make them as light as possible without sacrificing any strength.

**MACHINED DELRIN FRONT ARMS FOR THE XXX-4**

For those of us who drive our Losi XXX-4 super hard, we may have had to make the occasional trip to the hobby shop for a new set of front suspension arms. Here's a way to make less trips: DPM's machined delrin arms are all but bulletproof and have four shock mounting holes for more adjustment. These units are direct install parts and require no extra hand fitting.

**FULLFORCE RC**

**SAVAGE 21 STEEL COMBO (EXTRA HARD)**

The folks at Robinson Racing are gear geniuses. Check out their newest toothed creation. The CNC Machined Spur/Clutchbell Combo will just about bulletproof your Savage, Savage 25 or Savage SS drivetrain. It comes as a 52t spur and with 14-bell combination, and uses all the stock bearings and slipper pad.
